

eltherm designer

The **eltherm designer 2.0** provides the tools to calculate, select and plan EHT systems and solutions for vessels and tanks. Selecting the appropriate eltherm trace heater, picking the associated accessories, and calculating key elements of EHT design have never been easier.

YOUR ADVANTAGES AT A GLANCE

- › Quick and easy heat-loss calculation
- › Planning and Management of entire pipe system projects
- › Automatic creation of customized item lists / bills of material
- › Calculated results based on latest heat tracing standards
- › Hazardous location designs to latest global standards
- › Export data in Microsoft Excel
- › Save your project and share with others in a group or team environment to optimize work flow and shorten design times
- › Design output for most-economical solution, projects and line lists are optimized for cost efficiency
- › Stand-alone Heat Loss Calculator Tool
