

Certificate

Retirement of Emission Certificates

eltherm Canada Inc. has compensated their 2022 Scope 1 and Scope 2 greenhouse gas emissions via the retirement of 3 emission certificates.

The total amount of emissions results in 3 tCO₂e and was calculated by INDUS Holding AG.

KlimaManufaktur GmbH offset the following volume of emissions on behalf of eltherm Canada Inc. for 2022:

3 t CO₂e*

The certificates originate from the **MRMPL Wind Power Project** (Gold Standard, GS7615, Vintage 2019). The retirement of the certificates can be traced following this link:

<https://registry.goldstandard.org/credit-blocks/details/331285>

Emissions were offset through the purchase and retirement of emission certificates by KlimaManufaktur GmbH.

For additional information, please visit www.die-klimamanufaktur.de

*CO₂e (CO₂ equivalent) is the internationally accepted measurement for the climate effect of greenhouse- gases and corresponds to the climate effect of 1 t of CO₂.

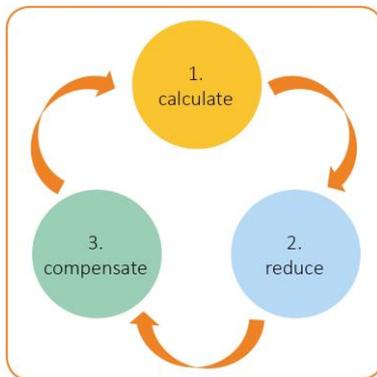

KlimaManufaktur

Standardised and individual products and services for your contribution towards climate protection

KlimaManufaktur is part of the FutureCamp Family. The experts at FutureCamp have been advising in their specialist areas: climate, energy, environment, sustainability and innovation since 2001. They are also available to advise customers of KlimaManufaktur on a range of expert topics.

Climate protection from A to Z

1. Carbon footprinting - as change will only happen if the impact is known
2. Reduction of CO₂ emissions and lowering of carbon footprint
3. Compensation of non-avoidable CO₂ emissions

Our climate protection projects

When selecting our climate protection projects, we pay attention to internationally recognized standards and requirements. Since we have developed more than 100 CDM, JI and VER projects ourselves, we know which criteria are important.

All climate protection projects in our portfolio follow the principle of "additionality", which ensures that the CO₂ emissions thereby avoided would not have been saved without the realization of the project.

In addition, all our climate protection projects make a local contribution to sustainable ecological, economic and social development and therefore support the United Nations' Sustainable Development Goals.

We have compiled an overview of climate protection projects for you on our website:
