Self-Regulating Parallel Trace Heaters

innovations in heat tracing

ELSR Trace Heaters

Application Options

The application options for the ELSR trace heaters range from freeze protection to temperature maintenance of pipes and vessels.

The eltherm® ELSR-NA trace heater is suitable for low and medium temperature applications, a high temperature version ELSR-HA trace heater is available for temperatures up to 392 °F (200 °C). Matching accessories complete our product offering.

All eltherm® trace heaters have been approved by national and international technical standards (e.g. VDE). ELSR-NA, ELSR-HA, ELSR-WA heating cables are also approved and certified for use in hazardous areas.

Design: 4 distinct options

We offer the widest selection of self-regulating trace heater designs, capable of handling every application, including service in harsh conditions and corrosive environments.

AO: Aluminum foil with a thermoplastic outer jacket

This design allows for easy assembly. AO design is available for all low and medium temperature heating cables.

BO: Protective braid with a thermoplastic outer jacket

This classic design provides a protective tin-plated copper braid. The BO design is available for low and medium temperature heating cables.

BOT: Protective braid with fluoropolymer outer jacket

This design features a fluoropolymer outer jacket to provide maximum resistance to aggressive chemicals, oil and fuel. The BOT outer jacket design is available for various ELSR-heating cables.

BF: Protective braid with food approved outer jacket, approved for use in potable water

A trace heater of this design can be used directly inside potable water lines. This design is currently only available for the ELSR-MA version.

Most products listed in this catalog are available for use in hazardous locations, please review the individual product data sheets for details on use in hazardous locations. The temperatures allocated to the products are the maximum permissible exposure temperatures. Our project engineers will be glad to assist you to design and dimension electrical heating systems.

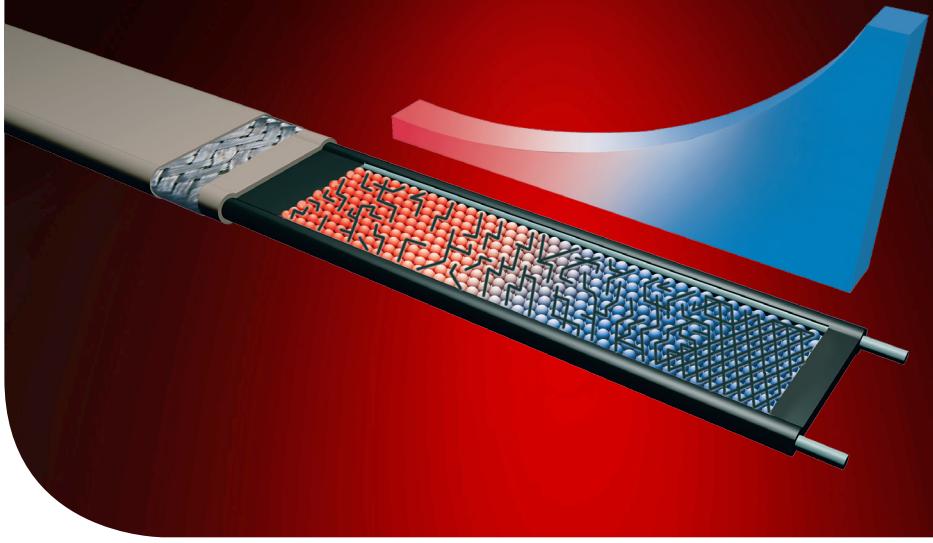

All products listed in the catalog are available ex stock (subject to prior sale).

Please note:

- All products listed in this catalog shall only be connected and commissioned by a qualified electrician.
- All applicable local electrical and safety regulations must be observed during installation and operation.
- For most economic design and accurate temperature maintain applications we recommend the use of a temperature control unit
- National and international electrical codes require the use of residual current devices (RCDs) or ground-fault circuit interrupters (GFCIs) to separate in time electrical heating from mains supply to prevent damage.

Specifications and advertising messages in this products and services catalog, irrespective of their nature, in particular descriptions, illustrations, drawings, samples, information pertaining to quality, condition, composition, performance, consumption and usability as well as dimensions and weights of the product range remain subject to change in as far as they are not expressly declared as binding. They do not denote any assurance or guarantee whatsoever. Minor deviations from the product specifications shall be deemed approved in as far as they are not unreasonable for the buyer.

We explicitly reserve the right to amend errors and alter technical data.

Self-Regulating Parallel Trace Heaters

Benefits:

- Self-regulating with adaptable output
- Various temperature range applications
- High chemical resistance
- No temperature regulation or limiting required
- Easy to install
- Can be cut to length off the roll

Application:

The ELSR trace heater (eltherm® -self-regulating) can be used for freeze protection and maintaining constant temperatures on vessels, pipes, valves, etc.. Except for the connections, the trace heater may be immersed in fluids. If used in an aggressive environment (the chemical or petrochemical industry), we lag the trace heater with a special chemically resistant outer jacket (fluoropolymer), option "BOT".

Operation:

Self-regulating trace heaters consist of two parallel bus wires embedded in a networked plastic heating element, doped with surrounding carbon particles. If the temperature increases during operation, the plastic expands due to molecular expansion and the distance between the carbon particles increases. Resistance increases and output drops. When it cools down, this process is reversed and output increases.

This physical property provides several benefits, including the ability to overlap the heater and installation without the requirement of a temperature limiting device.

Features

Self-Regulating Trace Heaters for Processes and Freeze Protection

eltherm's ELSR-NA line of self-regulating trace heaters are designed for freeze protection and process temperature maintenance up to 140 °F (60 °C) and are suitable for a wide range of commercial and industrial applications. The NA series of trace heaters are approved for use in non-hazardous and hazardous locations. The BOT version is configured for use in corrosive environments, including organic chemicals and corrosives found in the oil, gas, and petrochemical industry.

Advantages:

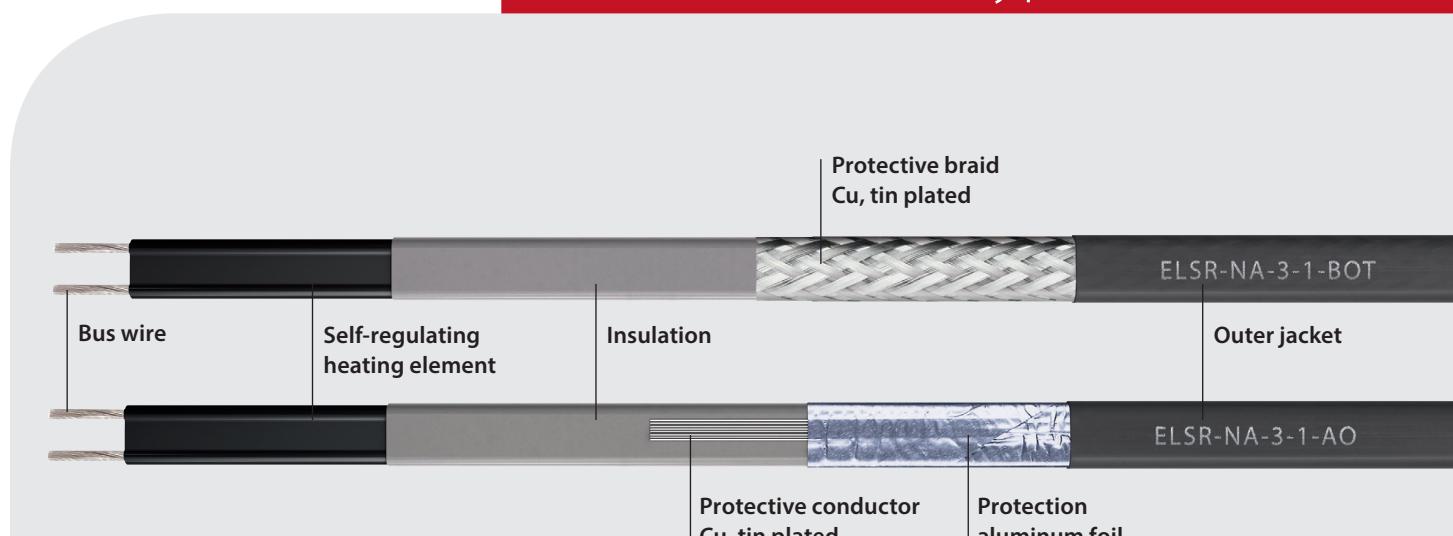

- Self-regulating
- Multiple nominal outputs
- May be cut to length in the field
- Weather Resistant
- UV-resistant
- Approved for use in hazardous areas

Applications:

- Freeze protection
- Heat tracing of instrumentation
- Pipes, vessel and tanks
- Chemical and petrochemical industries
- Oil and gas industries
- Food processing
- Automotive
- Tank bottom heating/frost heave prevention of LNG and cryogenic terminal storage tanks

Self-Regulating Trace Heater

High Temperature

eltherm's ELSR-HA self-regulating trace heaters are designed for high process temperature maintain applications up to 392° F (200 °C) and are suitable for a wide range of industrial service. They are approved for use in non-hazardous and hazardous locations. The materials used provides maximum protection for service in the harshest environments, including organic chemicals and corrosives in the oil, gas and petrochemical industry.

Advantages:

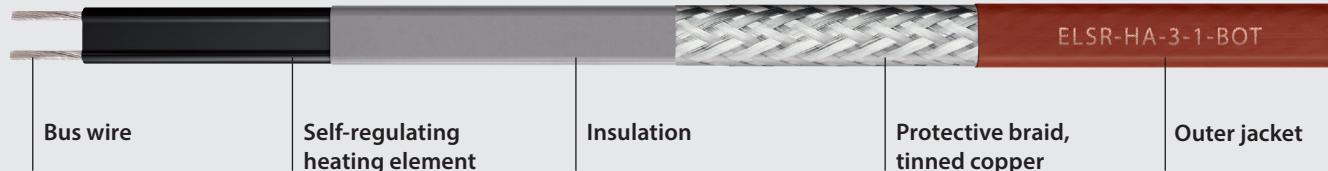

- Maximum maintain temperature 248 °F (120 °C)
- Maximum exposure temperature 392 °F (200 °C)
- Self-regulating
- Various nominal outputs available
- May be cut to length in the field
- Moisture proof
- Highly resistant to chemicals and corrosive environments
- Approved for use in hazardous areas

Applications:

- Freeze protection
- Heat tracing of instrumentation
- Pipes, vessel and tanks
- Chemical and petrochemical industries
- Oil and gas industries
- Food processing
- Automotive
- Tank bottom heating/frost heave protection of LNG and cryogenic terminal storage tanks

Self-Regulating Trace Heaters

Medium Temperature

eltherm's ELSR-WA self-regulating trace heater is designed for heat tracing of vessels, pipes, valves and other uses in medium temperature ranges between approx. 85 to 175 °F (30 to 80 °C). ELSR-WA heaters are frequently used to heat trace process and drain lines in the food processing industry, or to maintain temperatures in hot water supply lines of large commercial buildings. ELSR-WA is approved for use in hazardous locations, making it ideally suited for medium temperature service for various industrial applications.

Advantages:

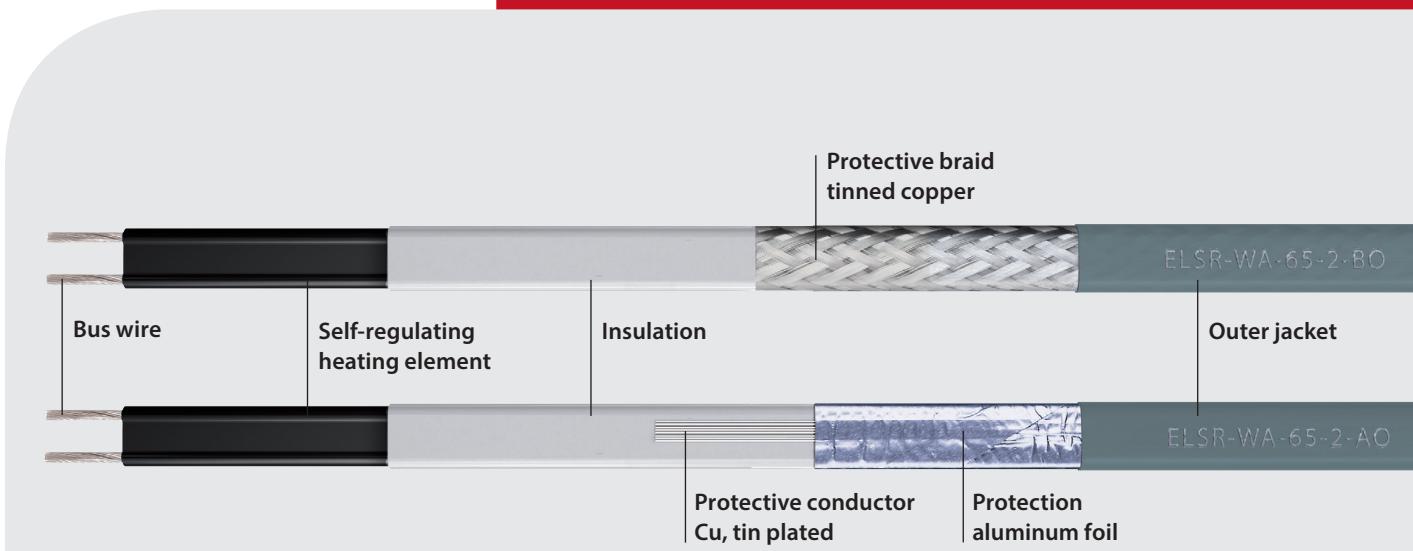

- Self-regulating
- Available in two nominal outputs
- Can be cut to length off the spool
- Water proof

Applications:

- Food processing industry
- Drain lines in canteens and large-scale kitchens
- Freeze protection of heated lines or pipes
- Installation of hot water supplies

Self-Regulating Trace Heater Micro-Size

eltherm's ELSR-MA self-regulating trace heater is extremely flexible and designed for installations which require smaller overall cable dimensions and shorter heating circuits. ELSR-MA is designed for freeze protection and all temperature maintain applications to 140 °F (60 °C).

Advantages:

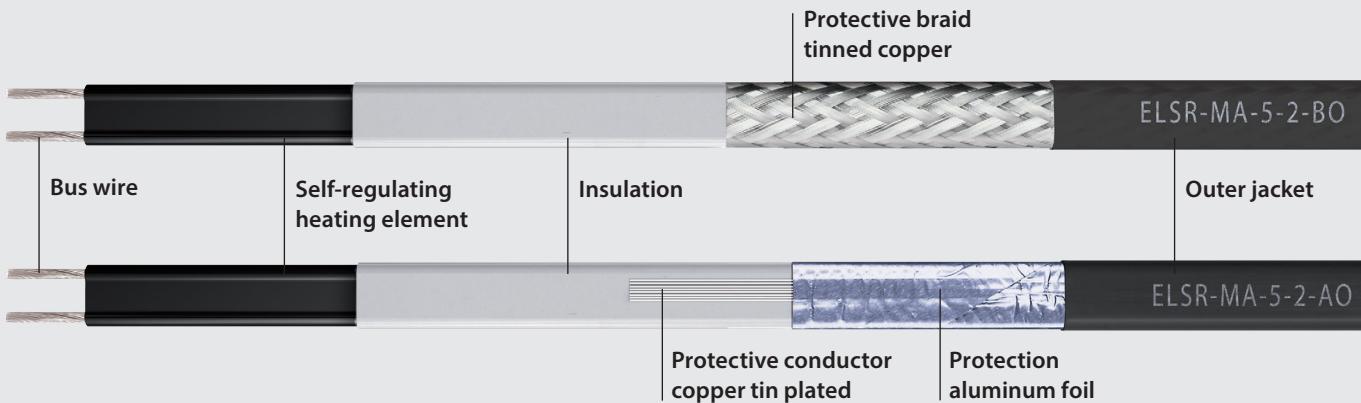

- Self-regulating
- Two nominal outputs
- Cut to length off the spool
- Moisture proof
- UV-resistant
- Small dimensions

Applications:

- Heat tracing of metallic and non-metallic pipes, pumps, vessels and valves
- Food processing industry
- Automotive
- Refrigeration
- Sprinkler systems
- Sewage pipes, intake drain pipes

Heating circuit lengths ELSR-MA-XX based on the following conditions:

- Voltage 120VAC (-1-) / 240VAC (-2-) ■ MCB type QO (100% utilisation)
- Voltage drop max. 10% ■ Single heater fed from 1 end

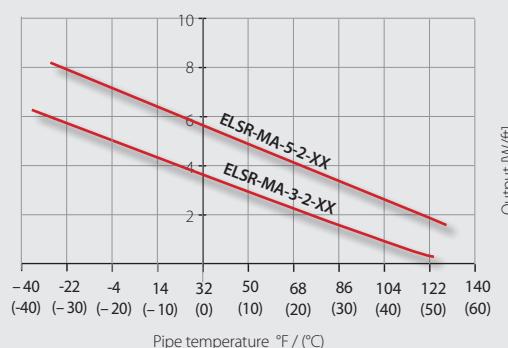

ELSR-MA-XX-1-XX output

(on insulated metallic pipes, in accordance with IEEE 515/CSA 22.2 130-03)

ELSR-MA-XX-2-XX output

(on insulated metallic pipes, in accordance with IEEE 515/CSA 22.2 130-03)

Self-Regulating Trace Heaters

Potable Water Applications

eltherm's ELSR-MA-BF is a light self-regulating trace heater specifically designed and approved for heat tracing of potable water lines. ELSR-MA-BF provides maximum performance in a most compact design and is optimized for short heating circuits for the most economical operation. This versatile trace heater comes with an NSF compliant outer jacket for installation inside of potable water pipelines.

Advantages:

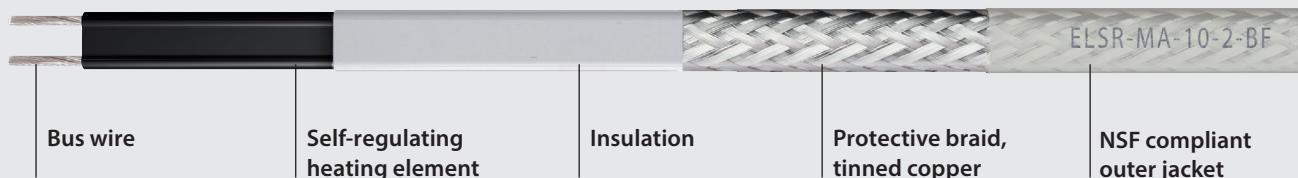

- NSF compliant
- Can be cut to length off the spool
- Moisture proof
- UV-resistant
- Small dimensions

Application:

- Internal trace heating for pipes and hoses

Type **ELSR-MA-BF**

Technical Information

Data

Outer jacket	Fluoropolymer
Bus wire	Nickel plated copper
Minimum start up temperature	-22 °F (-30 °C)
Maximum exposure temperature (power off)	140 °F (60 °C)
Maximum exposure temperature (power on)	140 °F (60 °C)
Nominal voltage	120 VAC (ELSR-MA-3-1-BF) 240 VAC (ELSR-MA-3-2-BF)
Bending radius, minimum	25 mm (1 in)
Installation temperature, min.	-49 °F (-45 °C)
Standards	IEEE 515, CSA 22.2 130.16
Certificates	FM CUS 3050047
Rating	PS (2,000 kPa / 290 psi)

Type ELSR-MA-BF

Design

- BF Protective braid and outer jacket, suitable for use in potable water (certified according to NSF/ANSI 61)

Type	Nominal output	Dimensions approx. (mm)	Weight approx. (g/m)	Part No.
ELSR-MA-3-1 BF	3 W/ft at 50 °F (10 °C)	8.1 x 5.8	68	BA225150
ELSR-MA-3-2 BF	3W/ft at 50 °F (10 °C)	8.1 x 5.8	68	BA225160
